Overview

This manual contains information that outlines the AML/J library ¹. The topics discussed in this section of the manual are:

- Overview
- Intended Audience
- Organization
- Associated Documents
- Assistance

Intended Audience

This manual is prepared for salespersons and perspective purchasers of the AML/J library.

Organization

This manual contains chapters detailing the AML/J library. The chapters include:

Chapter 1	Introduction - Describes the overview, intended audience, organization, associated documents, and where to acquire additional assistance.
Chapter 2	System Description - Describes general information about the AML/J library components.
Chapter 3	System Specifications - Describes the physical and electrical specifications of the AML/J library components.
Chapter 4	System Configuration - Describes the structure of the basic AML/J library and optional components available for AML/J library.
Chapter 5	Survey Data - Provides space for planning physical, electrical, and environmental requirements. This information is required by the installation team.

1. AML/J is a trademark of EMASS, Inc. Throughout the remainder of this document, we refer to AML/J library as AML/J

Associated Documents

Overview

The EMASS Automated Media Library (AML) is a fully automated, robotic media library that offers an enterprise solution to data management and backup. An example of an AML/J configuration is shown in Figure 2-1.

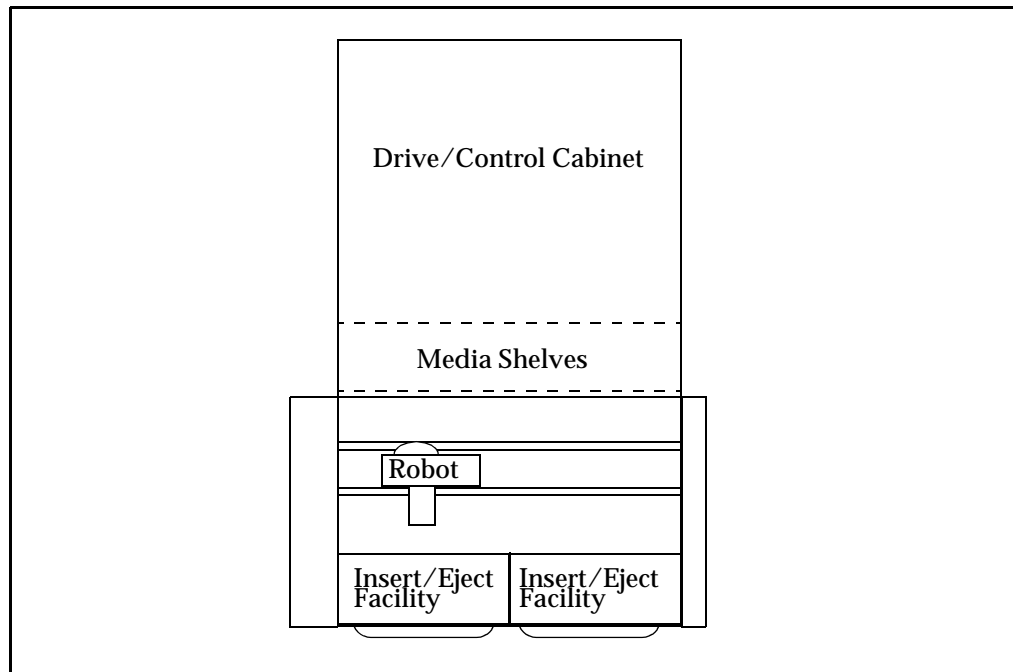

Figure 2-1 AML/J Example Configuration

System Operational Flow

Major system operational components include the following:

- Host
- AMU
- Programmable Multi-Axis Controller (PMAC)

The basic operational philosophy of the AML/J is that the host system is always the master. During normal processing, all commands originate from the host system.

When the host software determines that a media library action is necessary, it creates the appropriate command string and sends it to the AMU for processing. The AMU receives and interprets the host command then issues appropriate commands to the PMAC Controller hardware.

The PMAC Controller hardware provides the movement signals for the Robot. After completing the actions, the PMAC Controller hardware returns status to the AMU. When all PMAC Controller status is returned, the AMU reports an overall result to the host system.

Hardware Components

The main hardware components of the AML/J library are the:

- Handling Unit
- Storage Segment
- Control Cabinet
- I/E unit
- Add-on Modules (optional)
- Modem (optional)

AMU

The AMU is the central interface of the AML/J library. The AMU maintains a copy of the library drives and media information in a relational database. During normal operations, the host computer directs the AML/J library. The AMU hardware and software components operate transparently.

Hardware Component

AMU hardware consists of:

- a computer with a color monitor, a mouse, and a keyboard
- Ethernet Adapter
 - and/or —
- a Token Ring with or without a 3270 emulation card
- PMAC Controller

Software Component

The AMU software components are:

- OS/2 Operating System
- Communication Manager/2, TCP/IP
- Database Manager/2
- AMU Archive Management Software (AMS). For additional information, refer to *Archive Management Software Support* on page 2-17.

Handling Unit

The Handling Unit accomplishes the mechanical access to the physical library storage and the drives via a robot. See Figure 2-2. The Handling Unit executes the PMAC commands and returns status messages.

Figure 2-2 Handling Unit

Robot

Media movements are performed by a robot. The robot is equipped with a multimedia gripper and a laser barcode scanner, see Figure 2-3. Typical movements include moving media into and out of the library, storing and retrieving media within the library, mounting and dismounting media from drive units, and scanning media barcode labels.

Components of the robot system include:

- Multimedia gripper.
- Laser barcode scanner
- Robot X Axis platform
- Robot Y Axis column

Figure 2-3 Robot with Storage Bins

Storage Segment

The AML/J product line consists of a family of Linear Racks for storage. Two Linear racks are maximum per base or expansion unit.

Linear Racks

See Figure 2-4. Each Linear Rack contains two segments. The segments consists of:

- rows which are media type dependent
- the number of positions per row (columns) also depends on the media type

Figure 2-4 Linear racks

Drive/Control Cabinet

Movement control signals are provided by the PMAC which resides in the Drive/Control Cabinet. See Figure 2-5. The control cabinet contains:

- AMU
- PMAC
- Power supply
- Drives
- Drive Controller (optional for some drives)

Figure 2-5 Drive/Control Cabinet

Insert/Eject Unit

Media are inserted into and ejected from the AML/J through the I/EF. The media are loaded by an operator into bins.

Two types of IE/F are offered. With the base AML/J Insert/Eject Unit, the media is entered or retrieved through the door. See Figure 2-6. With the IE/F-D, the door must be opened to insert or retrieve media. Refer to Figure 2-7 on page 2-11. The capacity and number of bins are determined by the type of IE/F and media.

The I/EF incorporates a media depository that stores unidentified volumes, defective media, and used cleaning devices.

Figure 2-6 Insert/Eject Unit

Figure 2-7 Insert/Eject Unit (IE/F-D)

Expansion Unit

 **Note**

The media Expansion Unit does not require a corresponding Drive Expansion Unit.

The Expansion Unit was designed to increase the capacity of the AML/J. Additional Insert/Eject units and additional media are available through the Expansion Unit. See Figure 2-8.

Figure 2-8 Expansion Unit

Drive Unit

 **Note**

For each additional Drive Expansion Unit, a corresponding media Expansion Unit is required.

The Drive Expansion Unit was designed to increase the number of available tape drives in the AML/J.

Software Components

EMASS software organizes and manages the AML/J. This software makes automated data manipulation possible without interfering with the performance of host system. EMASS software automatically receives messages, coordinates tasks, manages and updates the library database, and provides recovery from media errors.

EMASS software can be tailored for many different library configurations. In addition, it can be reconfigured to accommodate an expanding library.

MVS Support

Unlimited MVS system images support is provided by Host Control Component (HCC-MVS) software. This software integrates transparently with MVS S/370, S/390, and Sysplex environments.

Host Control Component (HCC) software

Media functions are routed from the host computer to the AMU AMS software. Media functions supported by HCC software include the following:

- Mount/Keep operations
- Volume insertion/ejection
- Administration of media transport cleaning
- Media label initialization and verification
- Automatic reply to outstanding Write to Operator with Reply (WTOR)
- Scratch media management

Communications functions between the host and AMU AMS software are provided by the following means:

- Local or remote VTAM LU2 (standard 3270 support)
- EXCP standard console communication (local NON-SNA 3x74 control unit)
- LU6.2 (APPC via Token-Ring or Ethernet adapter)

Minimum software requirements to support EMASS software in the MVS environment include the following:

- MVS-SP1.3.6 for JES2
- MVS-SP2.2 for JES3
- SMP/E
- Assembler H
- Standard MVS utilities

UNIX Support

Software solutions to accessing a media libraries are implemented through the UNIX virtual file system layer.

AMASS software

AMASS software presents the AML/J library as on-line direct access mass storage. The AMASS software provides the following features:

- The AML/J library appears a single device
- The AML/J library utilizes a single mount point
- The data on the media appears as a standard UNIX directory with files
- Write or read to media utilizes the same approach as magnetic disk
- Raw cache partitioning provide high performance

Files are accessible across the network through standard communication protocol. The protocols include:

- NFS
- TCP/IP
- RFS
- FTP
- Telnet
- HYPERchannel

Requirements to support AMASS software are platform dependent. Additional detailed information is provided in the part number *600307 AMASS Documentation Set* manuals.

DataMgr software

DataMgr is an integrated, layered, file migration application that requires and operates with AMASS software. DataMgr provides the following features:

-
-
- Fully distributed architecture
 - File migration from expensive magnetic disk space to inexpensive storage media
 - Transparent access to the migrated files
 - Convenient access to migrated data during reloads
 - Flexible migration policies determine the criteria for file relocation
 - File replication across distributed servers
 - Multi-tier migration

Additional detailed information is provided in the part number *600336 DataMgr Documentation Set* manuals.

FileServ software

FileServ software balances on-line media with stored library media for quick access to data. The FileServ software provides the following features:

- The data on the media is accessed via standard UNIX operations using filesystem(s) as tracking points
- Tracks multiple users of the same file to prevent multiple mount actions
- File migration from expensive magnetic disk space to inexpensive storage media
- Transparent access to the migrated files
- Flexible migration policies determine the criteria for file relocation
- Media errors are retained as a means to identify suspect defective media

Files are accessible across the centralized or distributed environments through:

- Ethernet
- FDDI
- HYPERchannel
- UltraNet[®]

Requirements to support FileServ software are platform dependent. Additional detailed information is provided in the part number *600309 FileServ Documentation Set (for SGI)* manuals and the part number *600255-01 FileServ Documentation Set (for Convex)* manuals.

VolServ software

VolServ software handles volume manipulation by class of data and media migration. The Volserv software provides the following features:

- Provides a robotic independent interface to a variety of robotic systems
- Determines on-line or stored media volume location
- Issues manual or robotic commands to retrieve and mount media
- Allows multiple clients to share a single media library
- User defined classes of media share a media library
- Supports multiple media types
- Pools drives to allow drives to be shared among clients
- User defined migration policy allows media to be migrated between on-line and off-line storage

Once a media volume is mounted, the files are accessible across the centralized or distributed environments through:

- Ethernet
- FDDI
- HYPERchannel
- UltraNet[®]

Requirements to support VolServ software are platform dependent. Additional detailed information is provided in the part number *600308-01 VolServ Documentation Set (for SGI)* and the part number *600308-02 VolServ Documentation Set (for SUN)* manuals.

DAS software

The distributed AML Server (DAS) is a software product with both client and server components. The server software modules support the OS/2 operating system platform and the client software modules support UNIX/AIX operating system platforms. They communicate from the UNIX/AIX clients to the OS/2 DAS server (AMU controller PC) across a TCP/IP connected network.

DAS allows client systems to request actions on selected media within the AML system. DAS performs the following requested actions:

- mounts media in a drive
- dismounts media from a drive
- inserts media into the library
- ejects media from the library

Requirements to support DAS software are platform dependent.

Archive Management Software Support

Operating in the OS/2 environment, AMU software consists of five proprietary operational processes and two proprietary utility processes. The task of each of the seven processes are listed below:

- Communication with host computer, robot control, Quadro Tower control, and Hexa Tower control
- Management of the library catalog using Source Query Language (SQL) database
- Kernel logic converts host commands into control commands
- User interface for operator requests
- Log and trace connection
- Database backup facility
- Remote file transfer

In normal (Automatic) operating mode, the host computer directs the AML/J and the AMU software operates transparently. Usually, commands are only input at the AMU console through the Graphical User Interface (GUI) for direct operator intervention.

Overview

This section contains the following information for the AML/J library:

- Physical Specification
- Electrical Specification
- Performance Specification
- Environmental Specification
- Regulatory Specifications
- Media Quantity Specification
- Flooring Requirement
- Barcode Requirement

Physical Specifications

Table 3-1 lists the key physical information for the components of the AML/J library.

Table 3-1 AML/J Component Physical Dimensions

Device	Height	Width	Depth	Maximum Weight	Load
Control Cabinet	78 inches	29 ¹ / ₈ inches	29 ¹ / ₄ inches	524 lbs ^a	88 lbs/sq ft
Model J Base Module ^b	78 inches	42 ³ / ₄ inches	32 ¹ / ₂ inches	720 lbs	75 lbs/sq ft
Model J Expansion Module	78 inches	29 ¹ / ₈ inches	31 ¹ / ₄ inches	690 lbs	110 lbs/sq ft
Drive Expansion Cabinet	78 inches	29 ¹ / ₈ inches	29 ¹ / ₄ inches	850 ^c	144 lbs/sq ft

a. Includes the weight of the heaviest available drive.

b. Cabinet width includes 8 ³/₄ inch left side non-movable panel and 4 ⁷/₈ inch right side movable panel as viewed from the front.

c. See Footnote a.

Electrical Specifications

Table 3-2 lists the key electrical information for the components of the AML/J library.

Table 3-2 AML/J Component Electrical Specifications

Device	Voltage (Single Phase)	kVA	AMP	BTU	Receptacle
Control Cabinet	120 VAC	0.7	6	2135	L5-15R
Model J Base Module	Not Applicable				
Model J Expansion Module	Not Applicable				
Drive Expansion Cabinet	120 VAC	Tape Drive Dependent			L5-15R

Table 3-3 lists the key electrical specifications of the EMASS drive components for the AML/J.

Table 3-3 AML/J Drive Component Electrical Specification

Device	Voltage (Single Phase)	AMP	BTU
EMASS 8490	120 VAC	5	225
EMASS 8590	120 VAC	3	1024
EMASS DLT4002	120 VAC	2	340
EMASS DTF1242	120 VAC	3	598
EMASS ER90	120 VAC	2	1706

Performance Specifications

Table 3-4 lists the key performance information for the AML/J library.

Table 3-4 AML/J Performance Specifications

Avg Actions per Hour	Peak Actions per Hour	Avg Time to Present Media	Max Time to Present Media	Pick Time
300	400	2.5 seconds	6 seconds	3 seconds

Environmental Specifications

Table 3-5 lists the key environmental information for the AML/J library.

Table 3-5 AML/J Environmental Specifications

Temperature	Humidity	Altitude
Minimum to Maximum: 60° - 90° F (16° - 32° C) Recommended: 70° - 75° F (21° - 24° C)	Minimum to Maximum: 15 - 75 percent Recommended: 45 - 65 percent	No limit

Regulatory Specifications

Table 3-6 lists the key safety and electromagnetic regulatory information for the AML/J library.

Table 3-6 AML/J Regulatory Specifications

Safety			EMC - EMI	
North America		Europe	North America	Europe
UL	CSA	TUV Rhineland	FCC, Part 15	CE Mark
UL1950 - ITE	C22.2 #950	EN60950	Class A	Class A

Media Quantity Specification

Table 3-7 lists the quantity of media contained in a single storage segment for the AML/J library. Refer to the document number *600300 AML Hardware Configuration Information* for capacity configuration requirements.

Table 3-7 AML/J Media Segment Quantity

Media	J1 ^a	J2 ^b	J3 ^c	J4 ^d	J5 ^e	J6 ^f	J7 ^g	J8 ^h	J10 ⁱ	J11 ^j	J12 ^k	IE/F-E ^l	IE/F-D ^m

- a. Storage segment above 1 of 6 drive shelves
- b. Storage segment above 2 of 6 drive shelves
- c. Storage segment above 3 of 6 drive shelves
- d. Storage segment above 4 of 6 drive shelves
- e. Storage segment above 5 of 6 drive shelves
- f. Storage segment above 1 of 4 drive shelves
- g. Storage segment above 2 of 4 drive shelves
- h. Storage segment above 3 of 4 drive shelves
- i. Storage segment for a full height
- j. Storage segment next to 1 IE/F-E
- k. Storage segment above IE/F - E
- l. Storage segment IE/F-E
- m. Storage segment IE/F -D

Flooring Requirements

In addition to being dust-free, physically, chemically, and acoustically appropriate, the flooring must meet the insulation resistance specifications. The insulation resistance between the floor surface and earth ground must be 1×10^5 to 1×10^8 ohms to prevent system failure or electrical shock. Sufficient resistance is achieved by using antistatic, nonconducting floor tile with a resistance of 1×10^6 to 1×10^9 ohms. Provide an appropriate connection to the metal portion of the ground plate as necessary to ensure the insulation resistance.

Barcode Requirements

Barcode scanning of individual media labels is accurate if the labels meets the ANSI MH10.8M-1983 standard and other additional requirements. The requirements are:

- ANSI MH10.8M-1983 Standard
 - Number of digits: 6
 - Background reflection: at least 25 percent
 - Print contrast: at least 75 percent
 - Ratio: at least 2.2
 - Module: 250 mm
 - Print tolerance: ± 57 mm
- Additional Requirements
 - Length of the rest zones: $5.25 \text{ mm} \pm 0.25 \text{ mm}$
 - No black marks can be present in the intermediate spaces or rest zones
 - No white areas may be present on the bars
 - Bars should read in a uniform direction. Nonuniform reading directions are feasible in principle, but have a detrimental effect on performance
 - Each label should be applied in the upper right corner of the tape cartridge recess (when oriented vertically)
- Quality Testing

Compliance with these specifications can be checked and documented with the Ergilaser 3000 High Density bar code measuring device that is manufactured by the Laetus Company.

Overview

This section of the manual solicits the information necessary to configure an AML/J library. Detailed information about drive, media, and storage support for the AML/J is located in the part number *600300 AML Hardware Configuration Information* manual. Order information for the AML/J components is located in the path number *600302 Product Order Information* manual.

Base Level

Check (✓) the desired base level configuration.

- Entry Level (2 drive shelves, 1 I/E unit)
- Base Module
- Base Model + 1 Expansion Unit
- Base Model + 2 Expansion Units
- Base Model + 3 Expansion Units
- Base Model + 4 Expansion Units
- Base Model + 5 Expansion Units
- Base Model + 6 Expansion Units
- Base Model + 7 Expansion Units
- Base Model + 8 Expansion Units
- Base Model + 9 Expansion Units

Media Types

Enter the quantity of the desired media type (maximum 4).

_____	3480/3490E
_____	EMASS 8490
_____	EMASS 8590
_____	OD512
_____	OD-R
_____	D2S
_____	VHS
_____	DLT
_____	8mm
_____	4mm
_____	DTF small
_____	DTF medium
_____	other _____

Drive Types

Enter the quantity of the desired drive types (maximum 4) and if the drive requires a rack mount.

Quantity	Type	Supported (Yes or No)	Rack Mount (Yes or No)
_____	Fujitsu 3490E	Yes	_____
_____	EMASS 8490	Yes	_____
_____	IBM 3490 C1A	Yes	_____
_____	IBM 3490 C2A	Yes	_____
_____	EMASS 8590	Yes	_____
_____	MountainGate 2150	Yes	_____
_____	ER90 HiPPI	Yes	_____
_____	ER90 IPI	Yes	_____
_____	Exabyte 8mm	Yes	_____
_____	Exabyte 4mm	Yes	_____
_____	HP OD	Yes	_____
_____	EMASS 4002	Yes	_____
_____	OTR	Yes	_____
_____	DTF 1242	Yes	_____
_____	non-EMASS drive	_____	_____

Insert/Eject Media Boxes

Enter the quantity of the requested media type handing boxes.

	I/E 1	I/E 2	I/E 3	I/E 4	I/E 5	I/E 6

Modem

Check (✓) if modem is desired.

_____ Yes

_____ No

Software Types

Check (✓) the requested type of software.

- HCC-MVS
- AMASS
- AMASS with DataMgr
- FileServ
- VolServ
- DAS
- Other _____

Host Connection

Check (✓) the requested type of connection.

- Ethernet
- Token Ring
- Coax
- Special _____

Communication Software

Check (✓) if Remote Access communication software is desired (CM/2 and TCP/IP are included with the system).

- Remote Access

Special Engineering Request

Check (✓) any desired special engineering requirements.

- None
- Hardware
- Software

Customer System Layout

Sketch the customer's system layout or cut and paste from the examples in Figure 4-3 on page 4-13. Figure 4-2 on page 4-13 represents a configuration example.

Overview

This section solicits pertinent information about the delivery site. Record all requested general information.

General Information

Place any additional information in *Additional Comments* on page 5-12.

Customer Name:

Mailing Address:

Sales Contact:

Telephone:

EMASS Sales Rep:

EMASS Account Mgr:

Shipping Address:

Installation Contact:

Telephone:

Target Installation Date:

Target Operational Date:

Physical Environment

Place any additional information in *Additional Comments* on page 5-12.

Room Dimension:

Ceiling Height

Ceiling Projection

Floor Type

Floor Load Capacity

Fire Protection

Customer Room Layout

Sketch the approximate measurements of the AML/J library room and any obstructions.

Figure 5-1 Room Layout

Scale: 1/4" = 1'

Site Preparation

The following customer supplied circuits are necessary for the proper installation and operation of the AML/J library.

Power Circuits

Refer to *Electrical Specifications* on page 3-4

 **Note**

This information must be conveyed to the customer to enable site preparation before installation.

120 VAC, single phase, 15A, circuit terminated in a NEMA L5-15R receptacle.

Telephone Connection

Refer to *Modem* on page 4-10.

 **Note**

This information must be conveyed to the customer to enable site preparation before installation.

Standard B1 analog telephone line terminating in an RJ-11 connector. Each AMU requires a separate line for the diagnostic modem.

Customer Building Layout

Sketch the building layout that indicates the route from the loading dock to equipment final destination. Indicate obstructions.

Figure 5-2 Building Scale

Grid = 1/4", No Scale

Access Conditions

Access to AML/J library room (elevator, stairs, door widths, etc.):

Dimensions and Location of Smallest Door or Opening:

Loading Dock Specifications (dock height, type of ramps, weather protection, etc.):

Semitrailer Accessibility (Y or N): _____

Preferred/Required Local Carrier Company:

Where Can Trailer Be Left for Staging?

Availability of Material Handling Equipment:

Location for Uncrating:

Preferred Time of Day for Unloading and Moving Materials:

Off Hours/Weekends Accessibility for Installation Team:

Procedure for Obtaining Building Passes:

Procedure for Scheduling the Elevator, Loading Dock, etc.:

Waste Disposal Considerations:

Bargaining Unit Considerations:

Other Considerations:

Additional Comments

Record any additional information from other pages. For reference purposes, note the page number with the information. Add and number additional sheets as necessary.
