1 StorNext Requirements

The following requirements must be met before installing StorNext.

- Security-Enhanced Linux (SELinux) is disabled.
- Quantum requires that system clocks be synchronized for proper functionality and recommends that NTP be used to ensure clocks remain synchronized across all nodes.
- The following packages must be installed:
 - gcc
 - make
- kernel-source (for systems running SUSE Linux)
- kernel-devel (for systems running Red Hat Linux)

Note: The version of the kernel-source or kernel-devel package must correspond to the version of the booted kernel. In addition, the system must have basic utilities installed such as perl, bash, grep, etc. as well as basic libraries. In general, StorNext will not install on a stripped-down installation of Linux.

1.1 Terminology

Acronyms used within the document:

| Acronym | Description |
|--------------------|----------------------------------|
| APFO | Advanced Path Failover |
| DDM | Distributed Data Mover |
| DLC ¹ | Distributed LAN Client |
| DLS ^{2 3} | Distributed LAN Server / Gateway |
| FX | StorNext FX Client |
| HA ⁴ | High Availability |
| LTFS | Linear Tape File System |
| LTS | Long Term Support (Ubuntu) |
| MDC | Meta-data Controller |
| RHEL | Red Hat Enterprise Linux |
| SLES | SuSE Linux Enterprise Server |
| SC | File System SAN Client |
| SN | StorNext |
| SNFS | StorNext File System |
| SNSM | StorNext Storage Manager |
| XWD | Xcellis Workflow Director |
| XWE | Xcellis Workflow Extender |

¹ StorNext Distributed LAN clients can be connected to either Distributed LAN Servers or StorNext G3xx or Xcellis Workflow Extenders.

² Distributed LAN Server on Windows supports up to 128 Distributed LAN Clients.

³ Gateway instrumentation is not available for Windows.

⁴ HA is not supported on G300 and Xcellis Workflow Extender Gateway Appliances. HA is supported on all other StorNext Appliances and MDCs.

2 System Requirements for Quantum StorNext Metadata Controllers

- StorNext 6 shared file system requires 3GB of memory.
- StorNext 6 managed file systems require 7GB of memory for each file system.
- StorNext MDC nodes require a minimum of 16 GB each.
- Running larger Storage Manager deployments requires additional memory for the Storage Manager database, growing up to 48 GB for systems as the number of managed files approaches 1 Billion.
- Additionally, Quantum recommends another 8 GB of RAM on the MDC node(s) for each file system to be used for buffer cache, to take advantage of the performance improvements in StorNext 6.
- For planning purposes, 10B unmanaged and 1.4B managed file counts are a guideline but are not an absolute or enforced limit. These values reflect our current guidelines for configuring a StorNext solution the number of files and the performance of your solution may vary.
- LTFS StorNext Support and Memory Requirements
 - StorNext Storage Manager support for LTO-8 tape devices with Linear Tape File System (LTFS) requires StorNext 6.0.6 or later.
 - Using LTO-7 tape devices and LTO M8 media with Linear Tape File System is not supported.
 - Support for LTO-7 M8 media with LTFS requires StorNext 6.2.0 (or later).
 - Reading and writing LTFS tape is slower than ANTF.
 - Trade-off performance for vendor independence.
 - StorNext performance is on par with any other implementation of LTFS.
 - For any MDC or any DDM client running movers and using LTFS there is extra memory needed.
 - LTFS will utilize more memory than ANTF. Each time a tape is opened, the full directory structure is pulled into memory. Thus, a potential significant amount of memory is required on top of the normal StorNext requirements.
 - For StorNext, for each file on a tape, there is an associated Object file that contains specific path information. Thus the #'s listed need to be doubled. Running with StorNext, the formula from the site would actually be drives x million files x 2 +1.
 - Example:
 - Customer has 2 million files written to an LTFS tape. Each time that tape is open the minimum amount of memory required is $2 * 2 + 1 = 5$ GB of memory.
 - If on top of this one has 5 tape drives and the potential of 2 million files on each tape the minimum amount of memory required would be $5 * 2 * 2 + 1 = 21$ GB.

3 StorNext and StorNext FX Client RAM, Disk and CPU Requirements

To install and run the StorNext or StorNext FX client software, the system must meet the following minimum hardware requirements.

For SAN (FC-attached) clients or LAN clients:

- 1 GB RAM
- 500 MB available hard disk space

For SAN clients acting as a Gateway server:

- 2 GB RAM
- 500 MB available hard disk space

Note: Gateway servers may require additional RAM depending on the number of file systems, LAN clients, and NICs used. See “Gateway Server Memory Tuning” in the StorNext User’s Guide for Gateway server memory tuning guidelines.

4 StorNext and StorNext FX Client File System Buffer Cache

See [StorNext File System Buffer Cache](#).

5 StorNext Software Upgrade Matrix

Sites running the following StorNext versions may upgrade directly to this release assuming the platform, service pack, architecture (x86 and compatible and Intel 64 and compatible), and StorNext component(s) are supported in this release.

All other versions of StorNext require additional steps to upgrade to this release.

Customers who remain current can generally upgrade to the latest release in a single update or upgrade. Customers who fall behind on updates or upgrades require more complex procedures and should contact Quantum Professional Services.

Important Notes

- If your system is running StorNext 5.4.0.3 with Storage Manager, then you must read and execute the instructions in [Product Alert Number 48](#) when upgrading to later versions of StorNext.
- Your system must be at StorNext 5.3.0 (or later) to upgrade directly to StorNext 6.0.6.1.
- Your system must be at StorNext 5.4.0 (or later) to upgrade directly to StorNext 6.2.x.
- If your Windows MDC is configured with small inodes, then you can upgrade to StorNext 6.x; however, you cannot convert the small inodes to large inodes. To support large inodes, you must use a Linux MDC.
- StorNext 6.x does not support M330 appliances.

StorNext Software Supported Upgrades / Updates

| MDCs at StorNext Release... | StorNext 5.3.0 | StorNext 5.3.1 | StorNext 5.3.1.1 | StorNext 5.3.2.1 | StorNext 5.4.0.1 | StorNext 5.4.0.2 | StorNext 5.4.0.3 | StorNext 5.4.0.4 | StorNext 5.4.1 | StorNext 5.4.1.1 | StorNext 6.0 | StorNext 6.0.1 | StorNext 6.0.1.1 | StorNext 6.0.5 | StorNext 6.0.5.1 | StorNext 6.0.6 | StorNext 6.0.6.1 | StorNext 6.1.0 | StorNext 6.1.1 | StorNext 6.2.0 | StorNext 6.2.1 | StorNext 6.3.0 | StorNext 6.3.1 | StorNext 6.3.1.1 | StorNext 6.4.0 | |

7 Supported Operating Systems and Platforms

- Windows Service Pack levels that are listed, indicate the supported versions. "Dot" releases, for example Windows 8.1, are distinct and not supported unless called out. RedHat Enterprise Linux is specified at the update level. Unless otherwise noted, kernel releases up to and including the release listed in this document is supported. Those beyond the kernel version listed are not supported. SuSE Enterprise Linux is specified at the Service Pack level. Unless otherwise noted, kernel releases up to and including the release listed in this document is supported. Those beyond the kernel version listed are not supported. Debian support is specified at the level of X.Y release levels. Ubuntu support is specified at the level of X.Y.Z release levels.
- HA and GUI are not supported on G300 and Xcellis Workflow Extender Gateway Appliances. HA and GUI are supported on all other StorNext Appliances and MDCs. Only 64-bit platforms are supported.
- StorNext does not install or start on a system today that has Red Hat Security-Linux (SELinux) enabled. There are checks in several configuration files and daemons that prevent the installation and use of StorNext with Red Hat Secure Linux (SELinux). There are no plans to add support for Red Hat Secure Linux (SELinux) currently.

Red Hat 6 CentOS 6

Update 9 – Kernel 2.6.32-696.30.1

Note: StorNext 6.0.6.1 has been successfully tested with Red Hat EL and CentOS 6 update 9. Support for this distribution requires using an updated kernel which includes the fixes necessary to correct *Spectre* and *Meltdown* security vulnerabilities 1, 2 and 3.

StorNext 6.0.6.1 does not work with Red Hat EL and CentOS 7 update 5.

If you are an administrator of a non-StorNext Appliance system, then you must be careful when upgrading a Red Hat EL and CentOS operating system. You must only upgrade to levels supported in this document.

8 StorNext Client Interoperability

Quantum recommends that clients be upgraded along with the MDC per the instructions in the installation procedures on the [StorNext Documentation Center](#).

However, back-revision clients are supported in [Supported Operating Systems and Platforms](#). If this is desired, you must observe the following notes:

- ❑ If a StorNext version is not listed in [Supported Operating Systems and Platforms](#), it is not supported as a back-revision client, even during the upgrade process.
- ❑ The StorNext SAN or Distributed LAN client’s software installed into a client may be a supported earlier version or the same version as the MDC/appliance. For example, StorNext 6.4 SAN or DLC client can be used with a StorNext 7.0.1 MDC/appliance.
- ❑ The use of StorNext SAN or Distributed LAN client software that is newer than the version installed onto an MDC/appliance is not supported. For example, StorNext 6.1 SAN or DLC client cannot be used with a StorNext 6.0 MDC/appliance.
- ❑ Some StorNext features, such as file system auditing, can be used with StorNext 5 Linux or Windows clients. See the [StorNext Documentation Center](#) for additional details.
- ❑ All core software components (file system and Storage Manager) installed on the same MDC/appliance must be the same version of StorNext.

9 StorNext Virtual Machine Support

StorNext supports SAN client and DLC clients running within VMware virtual machines where the operating system the client is running on is Linux or Windows. Only 64-bit platforms are supported. The following table shows general compatibility.

| Operating System | Kernel or Release | File System SAN Client (See Note A) | File System LAN Client (See Note B) |
|---|--|--|--|
| Windows Server 2008 Windows Server 2012 Windows 7 Windows 8, 8.1 Windows 10 | All SN supported service packs in the supported operating systems and platforms table. | ✓ | ✓ |
| RHEL 6.x | All SN supported service packs in the supported operating systems and platforms table. | ✓ | ✓ |
| RHEL 7.x | All SN supported service packs in the supported operating systems and platforms table. | ✓ | ✓ |
| SLES 11.x | All SN supported service packs in the supported operating systems and platforms table. | ✓ | ✓ |
| SLES 12.x | All SN supported service packs in the supported operating systems and platforms table. | ✓ | ✓ |

NOTE A: Setting up a SAN client within a virtual machine can be complicated and should be done with great care to avoid data loss.

Guests running StorNext SAN clients have limited cluster functionality due to the use of RDMS to access storage. In particular, snapshots, vMotion, DRS, and fault tolerance are disabled. If these features are required, use DLC clients instead.

To configure StorNext SAN clients in VMware guests, be aware of the following considerations:

- StorNext Data LUNs must be assigned to each StorNext SAN client VM using Raw Device Maps (RDMs) in /Physical Mode/ on a Shared virtual SCSI adapter.
- Never use /Virtual Mode/ RDMs for StorNext LUNs.
- Consult your storage vendor for details on properly configuring the storage for use as VMware vSphere to use raw LUNs as RDMs.
- On each SAN client, generate a raid-strings file by running the command:
 - `cvlabel -R > /usr/cvfs/config/raid-strings`
 - Then open /usr/cvfs/config/raid-strings in a text editor and change the third column to JBOD for all storage types. This disables StorNext multi-path handling, which is not needed in a guest. The host will handle multi-pathing.

NOTE B: To configure StorNext Distributed LAN Clients in VMware guests, follow the same procedures you would for a physical system. There are no VMware-specific requirements or issues.

10 General Compatibility with other Products

StorNext Partial File Retrieval (PFR)

| Partial File Retrieval Version | StorNext 5 Release 5.3.x, 5.4.x | StorNext 6 Release 6.0.x through 6.1.x | StorNext 6 Release 6.2.x, 6.3.x, 6.4.x |
|--------------------------------|---------------------------------|--|--|
| 1.2 | Yes | Yes | No |
| 2.0.0.16 | Yes | Yes | Yes |

Note: For PFR 1.0.2 and earlier only, StorNext Partial File Retrieval utilizes the StorNext API (SNAPI) 2.0.x component. PFR 1.1 and above use Web Services which are included in StorNext 4.2 and above.

Note: For PFR 2.0.0.12 and later, PFR includes StorNext Web Services (V2) with the HTTPS protocol and user authentication.

| StorNext API (SNAPI) | | | | |
|---------------------------|-------------------|-------------------|--------|--------|
| SNAPI 2.0.x (Server Side) | RHEL6 & Appliance | RHEL7 & Appliance | SLES11 | SLES12 |
| StorNext 5.3.x | 2.0.3 | 2.0.3 | 2.0.3 | No |
| StorNext 5.4.x | 2.0.3 | 2.0.3 | 2.0.3 | 2.0.3 |
| StorNext 6.0.x | 2.0.3 | 2.0.3 | 2.0.3 | No |
| StorNext 6.1.x | 2.0.3 | 2.0.3 | 2.0.3 | 2.0.3 |
| StorNext 6.2.x | No | No | No | No |
| StorNext 6.3.x | No | No | No | No |
| StorNext 6.4.x | No | No | No | No |

Notes:

StorNext 6.0.0 and StorNext 6.0.5 includes StorNext Application Programming (SNAPI) version 2.0.3 to ensure StorNext Storage Manager interoperability with Quantum AEL and Scalar libraries, as well as ongoing support for ISV and end-user applications.

Beginning with StorNext 4.x, StorNext web services replaced SNAPI. Web services provides all the functionality of SNAPI, plus additional capabilities, and is included with StorNext at no additional charge.

StorNext Web Services enables you to run third-party application program interfaces (APIs) with StorNext. To view the latest commands supported by the StorNext Web Services, refer to the [StorNext 6 Web Services Guide](#).

SNAPI server supports back-level and forward-level connectivity to certain SNAPI client versions, per the table below.

| SNAPI 2.0.x (Client Side) Compatibility with SNAPI | | | |
|--|--------------------|--------------------|--------------------|
| | SNAPI 2.0.1 Client | SNAPI 2.0.2 Client | SNAPI 2.0.3 Client |
| SNAPI 2.0.1 Server | Yes | Yes | Yes |
| SNAPI 2.0.2 Server | Yes | Yes | Yes |
| SNAPI 2.0.3 Server | Yes | Yes | Yes |

| Product | Reference |
|-------------------------------|---|
| F2000 | <p>Quantum supports the F2000 with 1.x software on StorNext appliances ONLY. The F2000 is not supported on customer-supplied MDCs running StorNext.</p> <p>The F2000 is supported on the following system software:</p> <ul style="list-style-type: none"> <input type="checkbox"/> StorNext 6.3.1.1 or later for the host StorNext appliance. <input type="checkbox"/> StorNext 6.3.1.1 or later for client systems – 6.3.0 and later provides performance enhancements for environments where 4K (or larger) video frames are read at 60 frames per second (FPS) (or higher). <input type="checkbox"/> macOS 10.14.6 is required for StorNext Mac clients connecting to an F2000 over FC using Xsan, and for StorNext Mac clients connecting via DLC. <input type="checkbox"/> Appliance Controller 2.3.3 or later – supports iSCSI/iSER storage configuration for VLAN-based converged storage networks; 2.3.0 and later includes the qstorage plugin/feature that supports F2000 configuration and RAS message support. |
| StorNext Connect | For compatibility between StorNext Connect and StorNext, see Planning and Compatibility . |
| StorNext Appliance Controller | For compatibility between StorNext Appliance Controller and StorNext, see Appliance Controller Compatibility . |
| Lattus | For compatibility between Lattus and StorNext, see the appropriate <i>Lattus Release Notes</i> document available online at Lattus PDF Downloads . |

12 StorNext Browser Support

StorNext user interfaces have been tested with the following browser versions.

| Browser | Version |
|-----------------------|---|
| Google Chrome | 88.0.4324.150 (64-bit) |
| Google Chrome | 88.0.4324.150 (Official Build) (64-bit) |
| Google Chrome (macOS) | 88.0.4324.146 (Official Build) (64-bit) |
| Internet Explorer | 181.17763.1637451.16299.0 |
| Microsoft Edge | 88.0.705.6241.16299.1419.0 |
| Mozilla Firefox | 85.70.0.1 (64-bit) |
| Mozilla Firefox | 65.0.2 |
| Safari (macOS) | 143.0.3 (1360816610.4.3.1.4.3.10.10.1) |

13 Supported Quantum Library and Drive List

Note

- StorNext Storage Manager support for Linear Tape File System (LTFS) based on Open LTFS and is compatible with other vendor’s implementations. LTFS tape format provides many of the same features as Quantum ANTF format, with the additional benefit of multi-vendor portability. LTFS is an ideal format for long-term archiving use, but it is slower than ANTF.
- The StorNext 6 implementation of LTFS is based on Open LTFS version 2.2.2.
- Support for LTO-8 with LTFS requires StorNext 6.0.6 (or later).
- Support for LTO-M8 with LTFS requires StorNext 6.2.0 (or later)
- Advanced Path Failover does not support Quantum LTFS.
- Starting with the StorNext 6.2.0 release, customers running with EDLM or ActiveVault in the library must update their Library Firmware to the version listed below and ensure that the library is configured to use the StorNext WebServices for communication (refer to the specific Quantum Library documentation for details on configuring the WebServices). The reason for this change is because SNAPI is no longer delivered in StorNext 6.2.0 (or later) and EDLM and ActiveVault took advantage of SNAPI. Now the library has been updated to use StorNext WebServices instead.
 - Scalar i6000, the firmware version will need to be i13 or later.
 - Scalar i500, the firmware version will need to be 710G or later.

| Supported Quantum Library and Drive List | | | | | | | | | |
|--|----------------------|--------------------------|----------------|------------------|------------------|-----------------|-----------------------|------------------------------|--|
| Vendor | Libraries | Drive Types ⁵ | StorNext 5.3.0 | StorNext 5.3.1.x | StorNext 5.3.2.x | StorNext 5.4.x | StorNext 6.0.x, 6.1.x | StorNext 6.2.x, 6.3.x, 6.4.x | Notes |
| Quantum | Scalar i500 | IBM LTO-2 | ✓ | | | | | | <ul style="list-style-type: none"> • LTFS is only available for LTO-5/6/7/8 drives which support partitioning. • Support for LTFS with LTO-7 drives requires StorNext 5.4.0 or later. • Support for LTFS with LTO-8 drives requires StorNext 6.0.6 or later. • LTO-8 support includes support for LTO-M8 formatted media. • Support for LTO-7 M8 media with LTFS requires StorNext 6.2.0 or later. • If using EDLM or ActiveVault, must be at version 710G or later. |

14 Supported Non-Quantum Library and Drive List

Large, complex StorNext Storage Manager solutions support the use of non-Quantum software such as Oracle StorageTek Automated Cartridge System Library Software (ACSLs) for centralized, multi-platform tape library management. Additionally, Storage Manager supports physical library partitioning to improve the utilization and logical sharing of enterprise-level tape libraries.

Note: Effective with the next StorNext feature release after StorNext 6.0.6, support for all versions of the T9840 drives will be dropped.

¹² The tape device and library have been tested individually, but this specific combination has not been tested. Although not formally tested, this drive and library pair is expected to work without any issues.

¹³ When using a T10000 Rev C drive with ACSLS 8.0.x, please assure that your cleaning cartridges are supported in that ACSLS release. Quantum has found a case where a cleaning cartridge isn't recognized by ACSLS 8.0.x and reports incorrect media type in the StorNext GUI. This report of incorrect media type does not prevent the cleaning cartridge from being successfully used, but can cause operator confusion. ACSLS 8.1.x corrects the issue.

| | | | | | | | | | | | StorNext 6.0.5 and later support the use of LTO-8 tape devices in all Spectra libraries |

15 Advanced Path Failover Compatibility

Using the StorNext Distributed Data Mover (DDM) feature can boost overall data movement performance by distributing data movement across multiple systems. To ensure data integrity, StorNext software requires the use of SCSI Persistent Reservations on StorNext metadata controllers and DDM clients. As SCSI persistent reservations control access to shared devices, such as tape, Storage Manager retains control of the tape device paths, even if a failover were to occur.

StorNext Storage Manager supports IBM Advanced Path Failover (APFO) for redundant paths to IBM LTO-6, LTO-7 and LTO-8 tape devices. Using IBM APFO requires SCSI Persistent Reservations to be turned off, as device reservations are handled by IBM’s software, not StorNext.

- StorNext 6.0.5 (or later) supports LTO-8 tape devices paired with Quantum Scalar i3, i6, i500 and i6000 libraries.
- StorNext 5 supports IBM Advanced Path Failover (APFO) with IBM LTO-6 and LTO-7 tape devices installed in Scalar i500 and i6k libraries.

Notes:

- IBM strongly recommends that tape and disk I/O use separate HBAs when used with the IBM Advanced Path Failover (**lin_tape**) driver.
- Advanced Path Failover does not support Quantum Linear Tape File System.
- IBM **lin_tape** driver versions 3.0.10 and 3.0.18 cannot be used with StorNext.
- Please refer to the IBM **lin_tap.ReadMe** the latest details about supported operating system versions and for a listing of supported/non supported versions of the Join Driver.
- SCSI-3 persistent reservations must be enabled in the **lin_tape.conf** file for IBM APFO if data path failover is not enabled. For additional information on how to configure **SCSI Persistent Reservations**, see the [Tape Devices and Persistent SCSI Reserve](#).

| Minimum Tested Version of Firmware / Driver Version | |
|---|-------------------------|

17 StorNext Security

StorNext supports two security models:

- UNIX permission bits
- Access Control Lists (ACL)

Although StorNext supports both security models, the version used depends on the client platform and system configuration settings within StorNext.

Display and manipulation of ACLs for NFSv4 is only supported when the NFS server is a StorNext Appliance running StorNext 5.4.0.1 or later.

See the [StorNext 6 Documentation Center](#) for complete details on StorNext security.

18 StorNext NAS and Appliance Controller Compatibility

18.1 Appliance Controller, StorNext, and StorNext Connect Compatibility

You can configure the Appliance Controller 2.x or earlier on StorNext Appliances, with the following StorNext and StorNext Connect App combinations. Keep in mind that only the listed configuration combinations are supported.

Note: Unless otherwise noted, most Appliance Controller features/plugins do not require a separate license. StorNext NAS is a separately-licensed feature, and must also be enabled on the system.

| Appliance Controller Version | StorNext Release | StorNext Connect Support |
|--------------------------------------|---------------------|--|
| Appliance Controller 2.0.1.2 – 2.3.x | 5.4.0 or later | NAS App v1 or later |
| Appliance Controller 2.0.x | 5.4.0 up to 6.1.0 | NAS App v1 |
| Appliance Controller 1.4.1.x | 5.4.0 up to 6.1.0 | Manage NAS App v6 or later |
| StorNext NAS 1.4.0.x | 5.4.0 up to 6.1.0 | Manage NAS App v4 |
| StorNext NAS 1.3.0 | 5.3.2.1 up to 5.4.1 | Manage NAS App v4 |
| StorNext NAS 1.2.5 | 5.3.2.1 up to 5.4.1 | Manage NAS App v4 Manage NAS App v3 |

18.2 Appliance Controller Upgrade Paths

For information about upgrading your version of Appliance Controller, see [Supported Appliance Controller Upgrade Compatibility](#) on the *Appliance Controller Documentation Center*.

18.3 StorNext Appliance Compatibility

See the [Quantum Documentation Portal](#) for documentation for these products.

- Xcellis Workflow Director ^a
- Xcellis Foundation ^a
- aiWARE for Xcellis ^a
- Artico (R630) Archive Storage Appliance ^a
- Artico (R520) NAS Storage Appliance ^b
- Pro Foundation ^a
- M660 ^b StorNext Metadata appliance ^a
- M440 ^b StorNext Metadata appliance ^a
- Xcellis Workflow Extender ^b
- G300 ^b

^a A StorNext NAS license is pre-installed

^b NAS clustering with Xcellis Workflow Extender / G300 supported as of 1.2; Scale-out NAS clustering with Xcellis Workflow Extender / G300 supported as of 2.0.x

18.4 Appliance Controller Supported Quantum Storage Arrays

| Quantum Storage Array* | Storage Array Release | Minimum StorNext Version | Minimum Xcellis Appliance Controller Version |

| F-2000 | 1.1.1 | 6.3.1.1 | 2.3.3 |
| F-1000 | 1.2 | 6.3.1.1 | 2.3.4 |

Appliance controller commands **qxsarray**, **qstorage** and **icsiadm** are run from a supported StorNext Appliance. StorNext acts as the host for the applicable storage arrays listed below.

- QXS-6G – **qxsarray** and **icsiadm** commands
- QXS-12G – **qxsarray** and **icsiadm** commands
- F-2000 – **qstorage** and **icsiadm** commands
- F-1000 – **qstorage** and **icsiadm** commands

18.5 NAS Protocol Support

Important:

If you will be using SMB and NFS protocols simultaneously, upgrade to StorNext 6.3.1 or later and Appliance Controller 2.3.3 or later.

The following file-sharing protocols are supported for StorNext NAS on Linux, macOS, and Windows operating systems:

| Protocol | Supported Versions/Features |
|----------|---|
| SMB | <ul style="list-style-type: none"> • SMB 3 • SMB 2 • SMB 1 (CIFS) – Quantum does not recommend • Protocol auto-negotiation with client • |
| NFS | <ul style="list-style-type: none"> • NFSv4 • NFSv3 |

18.6 User Directory Support

Important:

You can use only one authentication scheme for a NAS cluster.

The Appliance Controller supports the following user directories:

| Authentication Scheme | Supported Versions/Features |
|----------------------------|--|
| Microsoft Active Directory | <ul style="list-style-type: none"> • 2016 • 2012 • 2008 • Unix extensions (RFC2307) • RID UID mapping |
| OpenLDAP | <ul style="list-style-type: none"> • Samba 3.2 schema extensions • OpenLDAP with Kerberos |
| Apple Open Directory | <ul style="list-style-type: none"> • macOS X 10.5 or higher • Uses CLI configuration procedure |
| Local Users | Local users can be created directly on the appliance |

18.7 StorNext Scale-Out NAS Clustering Support

- Scale-Out NAS Clustering is supported in StorNext 5.4 and later. For more information, see [NAS Clusters](#).

18.8 NAS Failover Support

- For scale-out NAS clusters support NAS failover for NFSv3 and SMB protocols all nodes in the cluster can participate as targets for NAS fail-over and load-balancing.
- Active backup failover for NFSv4 and SMB protocols is supported on MDC pairs.

18.9 haProxy SMB failover is supported with Xcellis Workflow Extender or G300 gateways.DNS Load Distribution

Evenly distribute client connections to nodes within a NAS cluster, facilitating greater network bandwidth and better redistribution results after a NAS failover occurs.

To take advantage of DNS load distribution, you must be running StorNext 6.0 or later, and running a dual-server system. Single server-node systems do not support DNS load distribution.

18.10 Appliance Controller Features Licensing/Configuration

The NAS feature

- This must be “enabled” in the **Service Menu** of a StorNext appliance in order to be functional.

The iSCSI feature

- This is installed by default with the Appliance Controller software.
- This does not require a separate license.

The SNMP feature

- This is installed by default with the Appliance Controller software.
- This does not require a separate license.

The Object Storage feature

- This is not installed by default.
- This must be downloaded from the [Appliance Controller downloads](#) page on quantum.com, and then it must be installed and configured separately from the Appliance Controller software.
- This does not require a separate license, but NAS must be enabled to use this feature.
- For Object Store configuration and management using the StorNext Connect NAS App, you must be running NAS App v3 or later. Before NAS App v3, Object Store was only supported using Appliance Controller console commands, documented on the Object Store Commands page of the Appliance Controller Documentation Center.

The QXS Array feature

- This is installed by default.
- This does not require a separate license.
- This feature was first released for Xcellis Workflow Director systems **ONLY** as of StorNext 6.1/Appliance Controller 2.1. It is included as of StorNext 6.1/Appliance Controller 2.2 for ALL OTHER appliance models.

The QStorage feature

- This is installed by default.
- This does not require a separate license.
- This feature supports F2000 storage arrays **ONLY**.

The iSCSI feature

- You must be running Appliance Controller 1.4.1.2 or later and StorNext Platform 6.0.1.1 or later to use the iSCSI feature. This feature is only supported on CentOS7-based appliances.

18.11 NAS Multiple Protocol Access and File Locking

Multiple protocol access to NAS and file locking is supported when your system is running both StorNext 6.3.1 or later and Appliance Controller 2.3.3 or later.

See [Multi-protocol File Locking](#) for information about multi-protocol access and file locking support and compatibility.

18.12 Network File System (NFS) Support

- .
- For non-clustered NAS environments, NFSv3 and NFSv4 are supported
- In a NFS HA environment, the following configurations are supported:
 - For scale-out NAS clusters, only NFSv3 is supported, and the nodes must be running StorNext 6.3 or later.
 - For active-backup NAS clusters, NFSv4 is supported for Xcellis Workflow Director, Xcellis Foundation, and Artico (R630) systems.

Limitations: StorNext NAS running on any version of StorNext and Appliance Controller

- Lock recovery is NOT supported for NFSv4 clients running CentOS version 7.4
- NFSv4 failover is NOT supported with scale-out NAS clusters
 - See [NAS Cluster Configuration](#) for additional information about NFS and NAS Cluster configuration
- NFSv4 delegations are NOT supported
- The display and manipulation of ACLs is ONLY supported when using NFSv4 and with StorNext version 5.4.0.1 or later
- ACLs are enforced for NFSv3, but CANNOT be displayed or manipulated

Limitations: Customer-supplied NAS (not StorNext NAS) running on any version of StorNext software

- Due to issues with lock recovery that may occur after rebooting, file locking is NOT supported when concurrently sharing the same StorNext file system from multiple NFS servers
- NFS is ONLY supported when using Linux NFS servers
- The display and manipulation of ACLs is NOT supported for NFSv3. However, ACLs are still enforced
- ⇨ The display and manipulation of ACLs for NFSv4 is NOT supported
- NFSv4 delegations are NOT supported

19 Data snpolicy Replication Compatibility

The following table provides compatibility between StorNext releases when using the replication feature. To ensure maximum snpolicy replication performance, Quantum strongly recommends that all systems utilizing snpolicy replication upgrade to StorNext 5.0.0 (or later).

Note: If a source replication policy uses deduplication, the target policy must also use deduplication.

| Source Release | Target Release | | | | | | | | | |
|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|
| | StorNext 5.0.x | StorNext 5.1.x | StorNext 5.2.x | StorNext 5.3.x | StorNext 5.4.x | StorNext 6.0.x | StorNext 6.1.x | StorNext 6.2.x | StorNext 6.3.x | StorNext 6.4.x |
| StorNext 5.0.x | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | | | | |
| StorNext 5.1.x | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | | | | |
| StorNext 5.2.x | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | | | | |
| StorNext 5.3.x | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | | | | |
| StorNext 5.4.x | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | | | | |
| StorNext 6.0.x | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | | | | |
| StorNext 6.1.x | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | | | |
| StorNext 6.2.x | | | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | | |
| StorNext 6.3.x | | | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ |
| StorNext 6.4.x | | | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ |

20 FlexTier™ License Compatibility

StorNext’s capability to tier to object storage systems and clouds has been tested with a wide range of disk-based object stores and cloud storage providers. The table below provides the current list of compatible object stores and cloud services. You can request formal compatibility testing for devices and providers not listed below from [Quantum Sales](http://www.quantum.com).

| Vendor/ Provider | Feature/ Platform | StorNext 6.4.x | StorNext 6.3.x | StorNext 6.2.x | StorNext 6.1.1 | StorNext 6.0.5.x | StorNext 6.0.x | License Type |
|-------------------|-----------------------------------|----------------|----------------|----------------|----------------|------------------|----------------|----------------------------|
| Amazon S3 | Simple Storage Service | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | FlexTier for Public Cloud |
| | Infrequent Access | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | FlexTier for Public Cloud |
| | Glacier ¹⁶ | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | FlexTier for Public Cloud |
| | Government Cloud | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | FlexTier for Public Cloud |
| | Commercial Cloud Services | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | FlexTier for Public Cloud |
| | Snowball | ✓ | ✓ | ✓ | | | | FlexTier for Public Cloud |
| Microsoft | Azure AppendBlob | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | FlexTier for Public Cloud |
| | Azure BlockBlob | ✓ | ✓ | ✓ | | | | FlexTier for Public Cloud |
| | Azure Data Box | ✓ | ✓ | | | | | FlexTier for Public Cloud |
| Google | Cloud Platforms using S3 | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | FlexTier for Public Cloud |
| | Native Google | ✓ | ✓ | ✓ | | | | FlexTier for Public Cloud |
| NetApp | Webscale StorageGRID | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | FlexTier for Private Cloud |
| IBM | Cloud Object Storage (Cleversafe) | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | FlexTier for Private Cloud |
| SCALITY | RING | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | FlexTier for Private Cloud |
| HGST | ActiveScale | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | FlexTier for Private Cloud |
| SwiftStack | Using S3 | ✓ | ✓ | ✓ | ✓ | | | FlexTier for Private Cloud |
| Quantum | Lattus AXR | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | Object Storage |

¹⁶ AWS Glacier feature: Amazon AWS “native” Glacier bucket feature is not supported by StorNext.

| Vendor/ Provider | Feature/ Platform | StorNext 6.4.x | StorNext 6.3.x | StorNext 6.2.x | StorNext 6.1.1 | StorNext 6.0.5.x | StorNext 6.0.x | License Type |
|------------------------|-------------------|----------------|----------------|----------------|----------------|------------------|----------------|----------------------------|
| | Lattus S3 | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | Object Storage |
| | P100/X100 | ✓ | ✓ | ✓ | ✓ | ✓ | | FlexTier for Private Cloud |
| Cloudian | HyperStore | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | FlexTier for Private Cloud |
| StorExcel | ORockCloud | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | FlexTier for Private Cloud |
| KeeperTech | KeeperSAFE | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | FlexTier for Private Cloud |
| Object Matrix | MatrixStore | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | FlexTier for Private Cloud |
| Wasabi | Hot Cloud Storage | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | FlexTier for Private Cloud |
| Caringo | Swarm | ✓ | ✓ | ✓ | ✓ | ✓ | ✓ | FlexTier for Private Cloud |
| Hitachi Vantara | HCP | ✓ | ✓ | ✓ | | | | FlexTier for Private Cloud |
| minIO | minIO S3 | ✓ | | | | | | FlexTier for Private Cloud |

The following object stores and cloud services require that you use the **S3 Compatible** option in the **Provider** list in the StorNext GUI:

| S3 Compatible | |
|------------------------|-----------------------------------|
| Caringo | Swarm |
| Cloudian | HyperStore |
| HGST | ActiveScale |
| Hitachi Vantara | HCP |
| IBM | Cloud Object Storage (Cleversafe) |
| KeeperTech | KeeperSAFE |
| minIO | minIO S3 |
| NetApp | Webscale StorageGRID |

| S3 Compatible | |
|---------------|-------------------|
| Object Matrix | MatrixStore |
| Quantum | P100/X100 |
| SCALITY | RING |
| StorExcel | ORockCloud |
| SwiftStack | Using S3 |
| Wasabi | Hot Cloud Storage |

Object stores and cloud services not listed have their own **Provider** option in the GUI. See [Configure Object Storage and Cloud Destinations](#) for additional information.

21 FlexSync™ Compatibility

| FlexSync with StorNext Software | | | |
|---------------------------------|----------------|----------------|----------------|
| FlexSync Version | StorNext 6.4.x | StorNext 6.3.x | StorNext 6.2.x |
| 2.1.5 | ✓ | | |
| 2.1.4 | ✓ | | |
| 2.1.3 | ✓ | | |
| 2.1.2 | ✓ | | |
| 2.1.1 | ✓ | ✓ | |
| 2.1.0 | | ✓ | |
| 2.0.3 | | ✓ | ✓ |
| 2.0.1 | | ✓ | ✓ |
| 1.3.0 | | ✓ | |

- FlexSync is a license enabled option for use with StorNext 6.0 (or later).
- Supported FlexSync data mover platforms include Xcellis Workflow Directors, Xcellis Workflow Extenders and M4xx and M6xx series appliances.
- You can use Flexsync with StorNext Storage Manager managed file systems (source or destination), if the FlexSync version is 2.1.0 or greater and the StorNext version is 6.3.0 or greater. See [FlexSync and Managed Files](#) for additional information.
- FlexSync supports third party file systems.
- Data protection solutions based on FlexSync must have at least one (1) data mover; multiple data movers can be used to maximize performance.
- A single data mover configuration can be used to protect local or cross-mounted file systems.
- FlexSync configurations that transmit data across a WAN or LAN connection to a remote destination use delta block compression to transfer only new or changed blocks to maximize network bandwidth. FlexSync software must be installed on all WAN or LAN connected destinations. At least two (2) FlexSync data movers must be licenses for WAN and LAN connected configurations.
- The FlexSync license is installed on the Xcellis or M-Series system that is also used when configuring FlexSync. This license key will state the total number of licensed data movers.

See the [FlexSync Documentation Center](#) for additional details regarding prerequisites, system guidelines, and compatibility.

22 Quantum Disk Storage Products Interoperability

22.1 H-Series Interoperability

All Quantum-branded H-Series Fibre Channel and iSCSI models can be used as primary storage in a StorNext environment. For multipath settings for the H-Series, see [Update Multipath Settings for External Storage Arrays](#).

22.2 F-Series Interoperability

All Quantum-branded F-Series fibre channel and iSCSI models can be used as primary storage in a StorNext environment. For multipath settings for the F-Series, see [Update Multipath Settings for External Storage Arrays](#).

22.3 QXS Interoperability

- ❑ All Quantum-branded fibre channel QXS models and iSCSI QXS models can be used as converged (metadata and user data), dedicated metadata storage or primary storage in a StorNext environment.
- ❑ QXS 12G chassis and components (not drives) cannot be interconnected with QXS 6G.
- ❑ Usage of virtual volumes is not recommended for StorNext file systems used for bandwidth intensive streaming workloads.

23 Offline File Manager (OFM) Compatibility

| Offline File Manager (for Microsoft Windows) | | |
|--|---------|---------|
| Supported Operating System | OFM 2.0 | OFM 1.1 |
| Windows 10 | ✓ | ✓ |

| Offline File Manager (for Apple macOS) | | | |
|--|---------|---------|-----------|
| Supported Operating System | OFM 2.0 | OFM 1.1 | OFM 1.0.x |
| Big Sur (11.0.1) | ✓ | ✓ | ✓ |
| Catalina (10.15) | ✓ | ✓ | ✓ |
| Mojave (10.14) | ✓ | ✓ | ✓ |
| High Sierra (10.13) | ✓ | ✓ | ✓ |

Quantum[®]

ABOUT QUANTUM

Quantum technology and services help customers capture, create, and share digital content—and preserve and protect it for decades. With solutions built for every stage of the data lifecycle, Quantum's platforms provide the fastest performance for high-resolution video, images, and industrial IoT. That's why the world's leading entertainment companies, sports franchises, researchers, government agencies, enterprises, and cloud providers are making the world happier, safer, and smarter on Quantum. See how at www.quantum.com.
