

StorNext Product Bulletin 79

Product	StorNext® 4.2.0 and 4.2.1
Document number	6-00960-120 Rev A
Summary	Windows Client deleting/renaming file permissions issues
Date	March 2012

Overview

Windows users with read-only permissions are able to delete or rename files or directories even though the file or directory security descriptor permissions are set to "Deny".

Symptoms

The StorNext 4.2.0 and 4.2.1 Windows Client has a problem in that it will return success to a request which asked for DELETE permissions even though the requester does not have DELETE permissions. This allows a user to delete a file or directory which they are denied delete permissions for.

Solution

The issue will be addressed in the StorNext 4.2.2 release and later releases of StorNext.

Workaround

The workaround for customers currently running 4.2.0 or 4.2.1 on Windows clients is to keep the Windows clients on a 4.1.X release until a fix is available.
