Product Bulletin 11

Product: StorNext® 2.4.2 builds 70 through 75

Summary: Possible Data Corruption when Modifying File Attributes

Date: July 2005

Problem: Data corruption can occur during any operation that modifies file attributes when that operation is performed over NFS to an SNFS client. This corruption can also occur on the local managed SNFS file system, but happens less frequently than over NFS.

Solution: If you have StorNext 2.4.2 maintenance release builds 70-75, ADIC recommends upgrading to StorNext 2.4.2 build 76 or higher, or StorNext 2.5 GA. For questions about upgrading StorNext, contact ADIC Technical Assistance Center (ATAC).
